

## Fiberglass Door Features & Benefits

GlassCraft premium fiberglass doors use a patented technology process that authentically reproduces the natural wood grain surface into a fiberglass door skin. This process uses hand-selected pieces of wood to build a master wood door with the most desirable wood grains and patterns. A silicone mold is made of the wood door that will accurately copy the finest details of the wood grain and this silicone copy is then transferred into a fiberglass door mold using Nickel Vapor Deposition Technology. This produces the most authentic fiberglass door skins that look and feel just like real wood doors.

This line included many new unique fiberglass products and superior construction:

- Limited Lifetime warranty
- Energy Star Qualified Products
- Authentic Realistic wood grains
- Handmade Iron Straps and Clavos
- Operable Exterior Wrought Iron Grilles
- 2 Panel Rustic Cherry Speakeasy Door Options
- Fir Craftsman 3 Panel Door Options
- ¾" Natural hardwood stile edge
- No rot composite door tops and bottoms
- CFC Free polyurethane closed cell foam core
- A 3 ½" engineered Laminated Strand Lumber stiles

Superior ability to withstand thermal deflection in extreme internal and external temperature differences. Fiberglass insert frames to match the doors performance during extreme temperature fluctuations
